

## 2001 Assisted Reproductive Technology (ART) Report: 2001 Fertility Clinic Report by State: Clinic Report

### REPRODUCTIVE CARE CENTER

SALT LAKE CITY, UTAH

A comparison of clinic success rates may not be meaningful because patient medical characteristics and treatment approaches vary from clinic to clinic.

Single women?	No	<a href="#">(See Appendix C for details)</a>			

<sup>a</sup> Reflects patient and treatment characteristics of ART cycles performed in 2001 using fresh nondonor eggs or embryos.

<sup>b</sup> When fewer than 20 cycles are reported in an age category, rates are shown as a fraction and confidence intervals are not given. Calculating percentages from fractions may be misleading and is not encouraged.

<sup>c</sup> A multiple-infant birth is counted as *one* live birth.

<sup>d</sup> Clinic-specific outcome rates are unreliable for women older than 42 undergoing ART cycles using fresh or frozen embryos with nondonor eggs. Readers are urged to review [national outcomes for these age groups](#).

<sup>e</sup> All ages (including ages >42) are reported together because previous data show that patient age does not materially affect success with donor eggs.
